SUMMARY

Software engineer with 10+ years of experience designing and building distributed and cloud-native systems. Strong background in .NET, platform architecture, and automation, with a proven record of organizational impact, scalability, and operational efficiency.

EXPERIENCE

Senior Engineer / Tech Lead • Siemens

Dec 2024–Present

Smart Infrastructure Lisbon, Portugal

- Serving as Senior Engineer and Tech Lead, leading the architecture of a centralized User Management platform integrating SAP, Salesforce, Dynamics, and ServiceNow—built from scratch and now in production.
- Building the system of record for employee lifecycle and automated license management (unused license detection, automatic notifications, auto-recovery), projected to save \$1M+ annually in Siemens global operations.
- Leading global onboarding/offboarding automation, reducing manual operations and ensuring consistent processes across multiple regions.
- Designing an extensible platform architecture to enable future integrations with additional enterprise systems.
- Driving the technical direction of a 2-developer team, defining stack, architecture, and technical tasks.
- Established an AI-assisted development workflow using Specification-Driven Development (SDD) with structured prompts (skills.md, rules.md) and GitHub Copilot agents, standardizing AI usage in the team to maintain code quality and accelerate development.

Skills: .NET, Azure, Angular, Azure SQL, Azure Functions, Microservices, DDD, TDD, CI/CD, Bicep/ARM, Enterprise Integrations, AI-Assisted Development (SDD, GitHub Copilot), Azure Monitor, Log Analytics

Staff Engineer - Platforms Architecture • Novabase (Fidelidade)

Apr 2021–Nov 2024

Lisbon, Portugal

- Led technical standardization across 17+ teams and 300+ engineers through platform engineering and technical leadership forums (monthly sessions with tech leads and company-wide tech talks).
- Built an Internal Developer Platform with reusable templates, structured logging, and CI/CD pipelines, eliminating 100% of logging-related rework, speeding up new project setup, and adopted by 70+ new projects.
- Designed an AI-driven issue analysis system integrating the Jira API and Azure OpenAI, automatically analyzing 100+ tickets/month from 300+ developers, using prompt engineering for automated categorization and probabilistic ranking, reducing manual analysis by 70% and enabling data-driven prioritization that identified critical performance bottlenecks.
- Designed a stream-based file management system (replacing Base64), removing network transfer size limitations.
- Created a project discovery and security analysis system covering 5,000+ projects, auto-identifying owners for contribution analysis, detecting package vulnerabilities via NuGet

API and correlating with SonarQube to build team dashboards, driving critical security fixes and quality improvements.

- Defined cloud-native architectural standards adopted across the organization.

Skills: .NET, Azure, Kubernetes, Docker, Microservices, SQL Server, DDD, TDD, CI/CD, Azure OpenAI, Prompt Engineering, Kibana, Observability

Senior Software Engineer · Agap2-IT (SoftFinança)

Jan 2020–Mar 2021

Lisbon, Portugal

- Worked as a Senior Software Engineer embedded at SoftFinança, contributing to the architecture and evolution of Marketplace and Core Banking platforms.
- Designed the initial architecture of a marketplace for pharmacies, applying Clean Architecture principles.
- Contributed to core banking systems for credit card products, supporting critical financial flows.
- Led performance improvements by optimizing LINQ and query composition, delivering significant response-time gains in high-volume transactional systems.
- Developed and evolved backend services using .NET Core, C#, Web API, and WCF, with optimized SQL Server data access.
- Worked in banking environments with high consistency, security, and availability.

Skills: .NET Core, Clean Architecture, LINQ, SQL Server, Web API, WCF

Senior Software Engineer · Mttechne (Ticket)

2019–2020

São Paulo, Brazil

- Worked as a Senior Engineer on Ticket's financial Transaction HUB, orchestrating all financial operations of the organization.
- Designed and evolved a microservices-based architecture, using event-driven patterns to support asynchronous, scalable financial workflows integrated with Oracle ERP.
- Contributed to the Ticket Shop e-commerce platform, developing backend services for checkout, processing, and card delivery.
- Applied DDD and TDD principles to model complex business rules and ensure high reliability in financial systems.

Skills: .NET Core, C#, Microservices, Event-Driven Architecture, DDD, TDD, Oracle, RabbitMQ, Docker, Kubernetes

Senior Software Engineer · Vizir (Natura & Ticket)

2017–2019

São Paulo, Brazil

- Built a global onboarding platform for Natura sales consultants, supporting multi-country operations and integrations with payment gateways.
- Led PoCs with AWS Lambda, API Gateway, SNS, and SQS, validating event-driven architectures for future cloud implementations.
- Contributed to Ticket's financial Transaction HUB, developing .NET Core microservices and applying DDD and TDD practices.

Skills: Node.js, AWS Lambda, API Gateway, SNS, SQS, MySQL, .NET Core, C#, Microservices, Event-Driven Architecture, DDD, TDD, Oracle, RabbitMQ, Docker, Kubernetes

Senior Software Engineer · Deal

2017–2019

São Paulo, Brazil

- Worked as a Senior individual contributor on the design and evolution of a B2B loyalty platform, cloud-based and multi-tenant, supporting gamification, rankings, cashback, and point-based incentives.

- Collaborated with other senior engineers to define platform architecture, replacing a client-specific legacy model with a configurable, reusable solution.
- Led backend development using .NET Core, C#, and REST APIs, applying modular architecture and bounded contexts to support customizable campaigns and business rules.
- Designed and implemented incentive and scoring engines, responsible for point accrual, campaign logic, rankings, and reward redemption through an integrated e-commerce platform.
- Ensured scalability and stability during high-volume processing peaks, especially in point distribution cycles.
- Served as a technical partner to Product Owners and Project Managers, translating complex business requirements into robust, maintainable solutions.
- Supported enterprise clients such as Nestle and Vivo, operating under high availability and performance requirements.

Skills: .NET Core, C#, REST APIs, Microservices, DDD, TDD, SQL, Azure

Software Engineer · Deal, Erisf, FCamara, Confitec, Prodesp, Vizir
São Paulo, Brazil

2012–2017

- Built, maintained, and evolved enterprise systems across public sector, energy, financial, loyalty, and legal domains, supporting critical business flows and operations.
- Designed and developed ERP systems, financial platforms, and distributed services, working close to critical data and complex business rules.
- Worked across multiple technology stacks, including .NET and Ruby on Rails, consolidating strong backend engineering and systems integration experience.
- Designed and exposed Web APIs and backend services, integrating systems via asynchronous and event-driven communication using RabbitMQ and Kafka.
- Contributed to the evolution of cloud and container environments, working with Azure, Docker, and Kubernetes to improve scalability and deployment consistency.
- Applied architectural patterns such as CQRS and modular design, supporting scalability, performance, and system maintainability.
- Worked in roles ranging from solo engineer to senior individual contributor, adapting to different team sizes and project criticality.
- Consistently delivered performance improvements, system stability, and maintainable solutions in production environments.

Skills: .NET, Ruby on Rails, Azure, CQRS, RabbitMQ, Kafka, Docker, Kubernetes, SQL, Web APIs

SKILLS

Technical	.NET, Microservices, DDD, TDD, CI/CD, SQL Server, Oracle
Cloud	Azure (Functions, SQL, Monitor), AWS (Lambda, API Gateway, SNS, SQS)
Platform	Kubernetes, Docker, RabbitMQ, Kafka, Observability

EDUCATION

M.Sc. in Computer Engineering
University of Evora, Portugal

2025 – Present

Associate Degree in Systems Analysis and Development
Cruzeiro do Sul University, Brazil

2013 – 2015

CERTIFICATIONS

Microsoft Certified: Azure Developer Associate (AZ-204)

BEYOND WORK

Blog geiltonxavier.dev, I write about software engineering and reflections on professional practice.
