SUMMARY

Software engineer with 10+ years building high-scale distributed systems on .NET and Azure. Currently at Siemens as a hands-on Solutions Architect and Technical Lead, designing enterprise platforms that integrate Dynamics CRM, SAP, Salesforce, and ServiceNow — with a projected \$1M+ in annual operational savings.

I operate as a force multiplier: I have led technical standardization across 300+ engineers, designed Internal Developer Platforms adopted by 70+ projects, and built cross-cutting influence in architecture decisions beyond my immediate team. I combine deep technical hands-on work with architectural thinking and engineering leadership.

EXPERIENCE

Solutions Architect & Technical Lead · Siemens Smart Infrastructure

Dec 2024 – Present

Lisbon, Portugal · Hands-on architecture and engineering leadership

- Architected a centralized User Management platform integrating Dynamics CRM, SAP, Salesforce, and ServiceNow — from zero to global production — with a projected \$1M+ in annual operational cost savings.
- Designed an employee lifecycle system with automated global onboarding/offboarding across multiple regions, eliminating manual operations and ensuring process consistency at scale.
- Established an AI-assisted development workflow using Specification-Driven Development (SDD) and GitHub Copilot Agents, standardizing AI practices across engineering teams.
- Led architecture decisions, technical reviews, and engineer mentorship, driving cross-team engineering standards within Smart Infrastructure.

Stack: .NET, Azure, Microservices, DDD, TDD, Bicep/ARM, GitHub Copilot Agents, Azure Monitor.

Senior Staff Software Engineer · Novabase (embedded at Fidelidade Seguros)

Apr 2021 – Nov 2024

Lisbon, Portugal · Platforms Architecture

- Led technical standardization across 17+ delivery teams and 300+ engineers through platform engineering initiatives and monthly tech leadership forums — acting as a cross-team architecture reference.
- Designed and delivered an Internal Developer Platform (IDP) with reusable templates and CI/CD pipelines, eliminating 100% of logging rework and reducing new project setup time by ~60% — adopted by 70+ projects.
- Built an AI-powered issue analysis system (Jira + Azure OpenAI) that reduced manual analysis by 70% for 300+ developers and surfaced critical delivery bottlenecks.
- Developed a security analysis system covering 5,000+ projects (Git/TFS), correlating NuGet vulnerabilities and SonarQube metrics into team-level quality dashboards.
- Participated in technical hiring, including interviews and evaluation criteria definition for senior engineers.

Stack: .NET, Azure, Kubernetes, Docker, Azure OpenAI, Prompt Engineering, Kibana, Observability.

Senior Software Engineer · agap2-IT (embedded at SoftFinança)
Lisbon, Portugal · Marketplace & Core Banking

Jan 2020 – Mar 2021

- Designed the initial architecture of a pharmacy marketplace platform using Clean Architecture.
 - Contributed to core banking system evolution for credit card products, supporting critical financial workflows.
 - Reduced API latency by 40% and peak database CPU usage by refactoring LINQ compositions in high-volume transactional systems.
- Stack: .NET Core, C#, Clean Architecture, LINQ, Web API, WCF, SQL Server.

Senior Software Engineer · Mttechne (embedded at Ticket/Edenred)
São Paulo, Brazil · Financial Systems

Jul 2019 – Dec 2019

- Contributed to an event-driven Transaction HUB processing 900K transactions/day at 99.9% availability, applying DDD and TDD in a mission-critical financial domain.
- Stack: .NET Core, Microservices, Event-Driven Architecture, DDD, TDD, RabbitMQ.

Senior Software Engineer · Vizir Software Studio
São Paulo, Brazil

Sep 2017 – Jul 2019

- Built a global onboarding platform for Natura (multi-country operations) with payment gateway integrations and event-driven architecture PoCs on AWS.
 - Designed a cloud-native multi-tenant B2B loyalty platform with gamification, cashback, and points-based rewards for enterprise clients including Nestlé and Vivo.
- Stack: .NET Core, Node.js, AWS Lambda, API Gateway, SQS, Docker, Kubernetes, RabbitMQ, Oracle.

Early Career (2012–2017)
Eris, FCamara, Confitec, Prodesp, Vizir, Deal

Enterprise-scale systems (ERP, financial, energy) for public and private sectors. Built strong foundations in distributed services, async messaging (RabbitMQ/Kafka), and cloud-native migrations.

TECHNICAL SKILLS

Architecture	.NET, Microservices, DDD, CQRS, Clean Architecture, TDD, Event-Driven.
Cloud & Platform	Azure (Functions, SQL, Monitor, OpenAI), AWS, Kubernetes, Docker.
DevOps & Data	CI/CD, Observability, RabbitMQ, Kafka, SQL Server, Oracle.
AI & Tooling	Azure OpenAI, Prompt Engineering, GitHub Copilot Agents, SDD.

EDUCATION & CERTIFICATIONS

M.Sc. Computer Engineering <i>University of Évora, Portugal</i>	2025 – 2026
B.Tech. Systems Analysis & Development <i>Universidade Cruzeiro do Sul, Brazil</i>	2013 – 2015
Microsoft Certified: Azure Developer Associate (AZ-204)	
IEEE Senior Member
